Executive Summary

ACCIDENTAL RELEASE PREVENTION AND EMERGENCY RESPONSE POLICIES

Intercontinental Terminals Company (ITC) in Deer Park, is committed to operating and maintaining our processes (especially those using hazardous substances) in a safe and responsible manner. We use a combination of accidental release prevention and emergency response planning programs to help ensure the safety of our associates and the public, as well as the protection of the environment. This document provides a brief overview of the comprehensive risk management activities that we have designed and implemented, including:

* A description of our facility and our uses of substances that are regulated by EPA's RMP regulation.
* An overview of our accidental release prevention programs.
* A five-year history of accidental releases for chemicals that are regulated by EPA's RMP rule.
* An overview of our emergency response program.
* An overview of planned improvements at the facility to help prevent accidental chemical releases from occurring and therefore adversely affecting our associates, the public, and the environment.
* EPA (RMP) - Required Certifications.
* Detailed information (data elements) about our risk management program.

STATIONARY SOURCE AND REGULATED SUBSTANCES

Our facility is a for hire bulk liquid storage facility that stores a variety of chemicals and petrochemicals. Our processes involve the following chemicals that EPA has identified as having the potential to cause significant offsite consequences in the event of a substantial accidental release:

Toxic

Vinyl Acetate Monomer 58,612,528 pounds

Flammables

1,3-Butadiene	71,182,196 pounds
Isoprene	33,571,077 pounds
1-Butene	6,965,706 pounds
Butylene	4,880,433 pounds
1,3-Pentadiene (Piperylene)	8,595,918 pounds

Our accidental release prevention programs and our contingency planning efforts help us to effectively manage the hazards that are presented to our associates, the public, and the environment by our handling of these chemicals.

GENERAL ACCIDENTAL RELEASE PREVENTION PROGRAM AND CHEMICAL-SPECIFIC PREVENTION STEPS

We take a systematic, proactive approach to the prevention of accidental releases of hazardous chemicals. Our management system addresses each key feature of a successful prevention program including:

* Process safety information
* Process hazard analysis
* Operating procedures
* Training
* Mechanical integrity
* Management of change
* Pre-startup review
* Compliance audits
* Incident investigation
* Employee participation

* Hot work permit
* Contractors

These individual elements of our prevention program work together to prevent accidental chemical releases. Our company and our employees are committed to the standard that these management systems set for the way we do business; and, we have specific accountabilities and controls to ensure that we are meeting our own high standards for accident prevention.

FIVE-YEAR ACCIDENT HISTORY

We keep records for all near misses and significant accidental chemical releases that occur at our facility. The following is a brief summary of accidental chemical releases involving materials covered under EPA's RMP rule during the past five years:

Toxic

No incidents have occured under the EPA's definition.

Flammables

No incidents have occured under the EPA's definition.

EMERGENCY RESPONSE PROGRAM

We maintain an integrated contingency plan, which consolidates all of the various federal, state, and local regulatory requirements for emergency response planning. Our program provides the essential planning and training for effectively protecting workers, the public, and the environment during emergency situations. Furthermore, we coordinate our plan with community emergency response plans.

PLANNED CHANGES and ACTIONS TAKEN TO IMPROVE SAFETY

The following is a list of improvements that we plan to implement at the facility to help prevent and/or better respond to accidental chemical releases:

Vinyl Acetate Monomer System

None

1,3-Butadiene System

None

Isoprene system

None

1-Butene System

Tanks 31-1 and 31-2 were inspected and repaired as necessary in 2015 and 2016, respectively. Tank 35-12 is currently out of service for inspection and repairs.

1,3-Pentadiene (Piperylene)System

The product was removed from Tanks 12-21 and 12-22 and placed into a new tank (Tank 35-5) provided with high/low level alarm, high level shutdown on tank, high temperature/pressure shutdown in 2014.

CERTIFICATIONS

Within the past five years, ITC's processes have experienced no accidental releases that caused an offsite impact. No additional measures were necessary to prevent offsite impacts from accidental releases. In the event of fire, explosion, or the release of a regulated substance from a process, entry within the distance encompassed by the specified endpoints may pose a danger to public emergency responders. Therefore, public emergency responders should not enter this area except as indicated in the RMP plan. The undersigned certifies that, to the best of my knowledge, information, and belief, which was formed after reasonable inquiry, the information submitted is true accurate, and complete.
